

CAPABILITY PROFILE · 2026

From Drawing to Delivery.

CNC laser cutting, bending, tube cutting, fabrication, machining, EDM & finishing — one manufacturing partner in Pune.

Plants: **Chakan MIDC & Bhosari MIDC**, Pune · ISO-certified quality system

11 processes. One RFQ.

CNC Laser Cutting

High-precision fiber laser cutting for steel, stainless steel, aluminium and copper — prototype to production.

CNC Bending

Multi-axis press brakes for complex geometries — air bending, bottoming and coining.

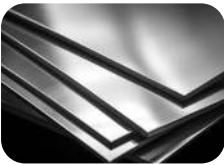

CNC Tube & Pipe Cutting

Rotary laser cutting for round, square and rectangular tubes — slots and holes in one pass.

Sheet Metal Fabrication

Complete assembly including welding, riveting and hardware insertion.

Custom Fabrication

End-to-end project management for complex assemblies and bespoke requirements.

CNC Machining

3, 4 and 5-axis CNC milling and turning for prototypes and production.

Wire EDM

Wire EDM for tight tolerances and hard materials — ideal for tool and die making.

Sand Blasting

Surface preparation and matte finishing that removes scale and rust for perfect coating adhesion.

Powder Coating

Durable, decorative RAL finishes with UV resistance and corrosion protection.

Laser Marking

Permanent part identification, logos and serial numbers on metal and plastic.

UV Printing

Full-colour direct printing on rigid substrates — ideal for control panels and branding.

MATERIALS

Materials we process

Mild Steel

CR (D513) · HR (IS2062 E250)

Stainless Steel

SS 304 · SS 316

Aluminium

5052 Marine · 6061 T6

Copper & Brass

ETP Copper · Brass

INDUSTRIES

Industries we support

 Automotive & Auto Components

 Industrial Machinery

 Electrical & Electronics

 Heavy Engineering

 Railways & Transportation

 Pharma & Medical Equipment

 Renewable Energy & Energy Equipment

 Electric Vehicles & EV Components

 Industrial Automation & Robotics

 Control Panels & Enclosures

 Material Handling & Conveyors

 Aerospace & Defence

 Food & Packaging Machinery

 General Engineering & OEM

QUALITY

Seven quality checkpoints

1. Drawing Review — Dimensions, material, thickness, geometry and customer requirements are reviewed before production.

3. Process Control — Operations are performed according to the approved requirement.

5. Fabrication Inspection — Where fabrication is involved, assembly and workmanship are checked.

7. Final Inspection — The finished component is reviewed before delivery.

2. Material Verification — Material is checked against the job specification.

4. Dimensional Inspection — Critical dimensions are checked against the drawing / specification.

6. Surface Finish Inspection — Finishing requirements are checked before dispatch.

Have an RFQ? Send us your drawing.

Drawing + material + thickness + quantity + delivery requirement —
that's all we need to quote.
